

**Food for thought...**

**Every cost effective  
pump has a Plymouth  
Engineered Shape in it.  
Or should have.**

**Cold drawn stainless and  
carbon alloy shapes...  
the preferred alternative for  
cost effective rotor production.**

Precision engineered shapes from Plymouth have helped many manufacturers greatly reduce machining costs and waste. And we can help you, too.

For unique or unusual shapes, Plymouth net and near-net extrusions, cold-drawn shapes and special shape tubing offer you significant advantages.

- Reduce production time and labor costs
- Low-cost part design for efficient production
- Reduce material usage and scrap
- Economical for long or short runs
- Available in a wide range of materials and grades, including carbon & alloy, stainless, nickel alloy and titanium
